MIMIC-IV Adult ICU Cohort Outcomes (First Stay, Length of Stay ≥ 24h)

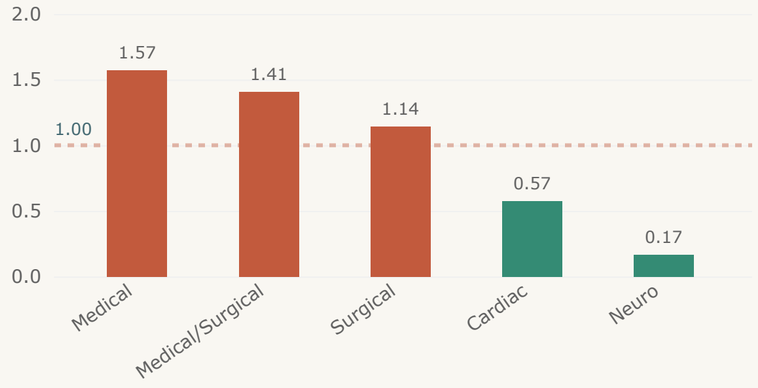

54548
Total Stays

10.78%
Mortality Rate

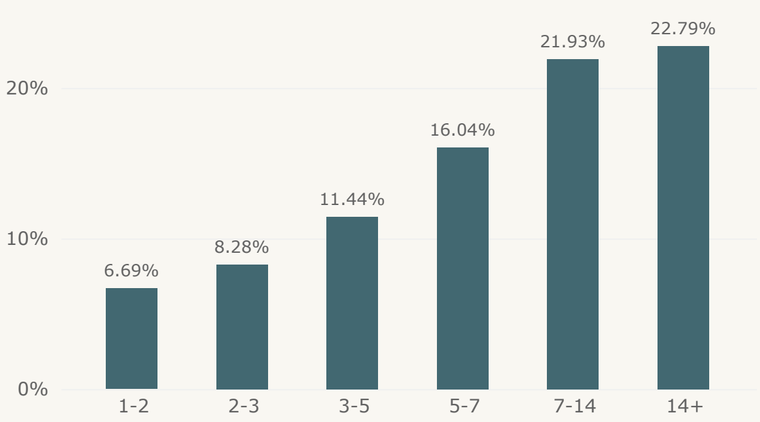

Mortality Rate
by Care Unit

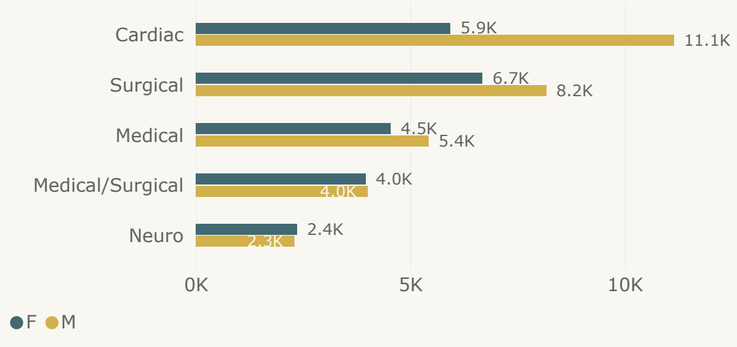

Mortality Rate Index
by Care Unit

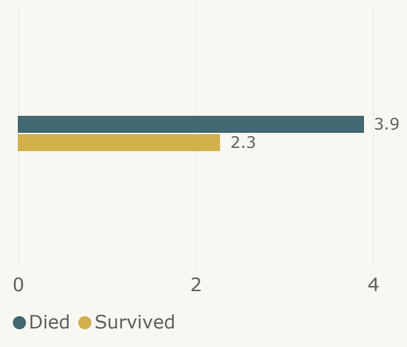

Mortality Rate
by Length of Stay Band

Total Stays
by Care Unit and Gender

Median Length of Stay
by Died in Hospital Category

Takeaways:

- Low-volume units (N < 900) were excluded from breakdowns; retained in cohort totals.
- Mortality indices reflect case mix, not care quality.
- Length of Stay is a competing-risks quantity; cohort floored at LOS ≥ 24h.
- Mortality rises with length of stay, but length of stay is an outcome of severity, not a cause i.e. longer stay does not mean higher risk.
